the objective of the 2014 international conference on computer network security and communication engineering cnsce2014 is to provide a platform for all researchers in the field of computer network security and communication engineering to share the most advanced knowledge from both academic and industrial world to communicate with each other about their experience and most up to date research achievements and to discuss issues and future prospects in these fields as an international conference mixed with academia and industry cnsce2014 provides attendees not only the free exchange of ideas and challenges

faced by these two key stakeholders and encourage future collaboration between members of these groups but also a good opportunity to make friends with scholars around the world as the first session of the international conference on CNSCE it covers topics related to computer network security and communication engineering CNSCE2014 has attracted many scholars researchers and practitioners in these fields from various countries they take this chance to get together sharing their latest research achievements with each other it has also achieved great success by its unique characteristics and strong academic atmosphere as well as its authority

there are a lot of excellent textbooks on the design of reinforced concrete structures however based on professional experience of more than thirty years the author feels that a separate book dedicated only to discuss the properties behavior and use of reinforcement in concrete construction is highly justified conventional textbooks on concrete structures focus primarily on the mechanics of reinforced concrete design properties of reinforcement are discussed in a limited manner only those which are deemed just adequate for discussing the theory of concrete mechanics typically such books contain little or no background information or explanation as to why the various code provisions or rules regarding the reinforcement are imposed or formulated it is observed that the application of modern materials and technologies in reinforcement manufacturing does not get proper attention or consideration in the engineering practices of many professionals based on the interaction with many engineers engaged in the design and construction of concrete structures the author feels that there is a lack of the essential background knowledge of the engineering properties and behavior of concrete reinforcement among many of them and such a lack of knowledge often leads to improper implementation of the code design provisions limited scope of our existing engineering curricula is primarily responsible for this this book has been written with an aim to fill this gap and to make engineering students and practicing engineers more up to date
